Set, Gas Casualty Treatment, Regimental

SOURCE: Tokyo, Japan.

IMPORTANCE: Not previously reported. Adjunct to Technical Reports on Regimental Hospital (MTR #185) and Gas Casualty Sets for Field Hospitals (MTR #187 and 190).

DESCRIPTION: This gas casualty set consists of two olive drab colored chests, 30" x 202 x 16". The chests are made of wood with metal reinforcements. Each chest has two metal hinges and two metal hasps. The cover has a leather skirt to help make it water proof.

Each chest has a leather covered rope handle on each end fastened to the chest by metal loops. Each is marked with the international Red Cross emblem on the back and on each end. The Japanese characters on the cover of each chest are interpreted as "Medical Corps Gas Medical Pannier".

COMMENT: This set of two chests contains medicinals used in the treatment of gas casualties. These two chests are attached to a Regimental Hospital (MTR #185) when the danger of gas is imminent. They are smaller and less comprehensive than the larger sets attached to Field Hospitals (See MTR #165, #187 and #190).

These chests are well packed and the drugs found therein are the usual kinds found in Japanese Gas Casualty Sets.
